Scanning Unit

Software screen shot

Kri-Sci Image Analyser

It is a complete system itself which include a scanning unit, laptop, contrast plates and suitable software to analysis length, breath, ratio, area, weight, color-discolor and statistical software and able to make statistical analysis of the rice/grains.

Salient Features

- Fast & easy menu driven
- Using Scanning Unit with resolutions of 200 dpi.
- The images save in bitmap (.bmp) format
- Powerful Stastical analysis software
- First it will count the number of grains and analyse them in terms of colour.
- The software will segregate the rice/Seeds on the basis of length, breath, area, perimeter & l/b ratio etc.
- Grain pictures are displayed on the left and numeric data on the right.
- Reports can be stored and printed.

CAN BE USED AS LEAF AREA METER.
