

Organic revolution:

India has built up unparalleled competence in organic agriculture. Organic farming is deep rooted into our tradition running through ages. Organic farming is not just business but way of life for our farmers. The new and revived organic movement is worldwide accepted. India has become destination for fairly traded organic produce.

Quessentials has pioneered organic Quinoa, Chia and Millets farming by joining hands with thousands of dedicated farmers across the country. We built capabilities in seed selection to crop introduction to farmer training and adopting world class processing technologies to Indian landscape.

organic super foods from India

QUINOA

Chia

MILLETS

Quinoa Exotica: Quinoa exotica is widely grown variety in India owing to its cost effectiveness and high yield. Its scores high in nutrition with 16% protein. This variety is appealing to food processing segments with applications into flour, pasta, fortification, bakery and snacks.

Bold white Quinoa: Delicious, bolder in size and whiter in color variety of Quinoa has been growing successfully in India for last 3 years and large quantity of it has been exported to Europe. Cooking time is shorter than other varieties of Quinoa. Color and size are comparable to Peruvian Quinoa. This variety is suitable for retail, gourmet and ready to eat, etc segments

Red Quinoa: Red Quinoa is another kind of quinoa which is highly popular among quinoa lovers. Grown in limited areas with less yield per acre. This variety is suitable for retail, gourmet and ready to eat, etc segments.

Black Chia Seeds: Black chia seeds: Highly nutritious black chia seeds with highest content of omega fatty acids are being grown in organic certified land in India for last 5 years. Availability and quality are comparable to south American origins.

White Chia seeds have 4% more oil content than black Chia seeds. Yield of white Chia seeds is comparatively higher.

Quessentials has created a state of the art processing facility exclusively to clean and process Chia Seeds. Customized black to white seed ratio and different pack sizes are available.

Organic Chia seeds from India are exported to all major countries across the world.

Proso Millet

Browntop Millet

Foxtail Millet

Millets:

Nutritional profile of Millets – By any nutritional parameter, Millets are far ahead of rice and wheat. In terms of their protein, mineral content, fibre, etc. Our Millets are hulled and ready to cook.

Energy Efficient plants - C4 plants are one such plant species that has a higher Water Use Efficiency (WUE). C4 plants (sorghum, maize and millet) represent about 5% of the Earth's plant biomass and only 1% of its known plant species. C4 plants improve carbon fixation over the simpler and more ancient C3. Millet is a C4 plant, which has a very efficient photo synthetic system for capturing carbon dioxide, than the less efficient C3 plants.

Quessentials is leading the millet industry in India by utilizing advanced technologies in processing of Millets. Our processing capacity is 300 Metric Tons per month.
