Manufacturer of Packing Machines & Processing Systems

## CUSTOMER'S SATISFACTION IS OUR POLICY

**Monarch Engineering** is a Pakistani company specializing in the design, development and manufacture of packaging systems for bulk, powder and granular products, in bags of any type, material and size, as well as “big bag” filling systems.

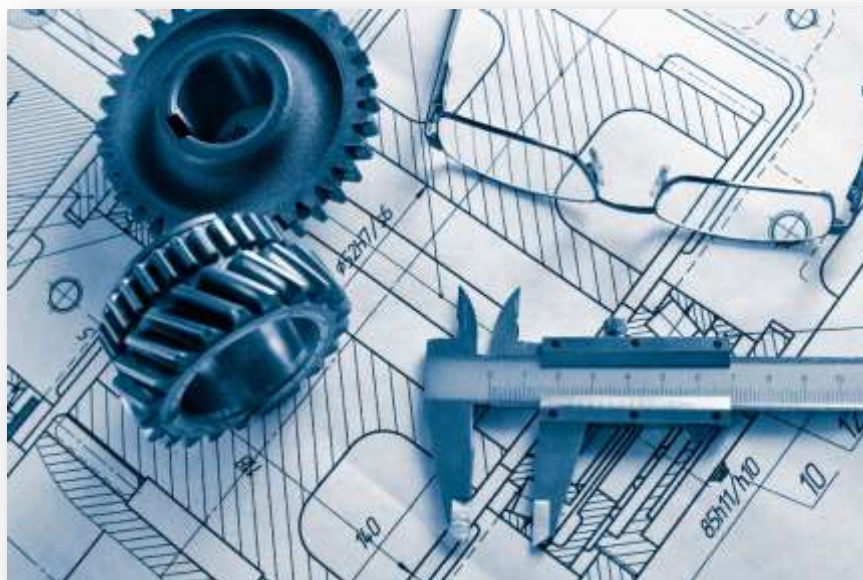

The range of packaging machines manufactured by **Monarch Engineering** offers a solution to the most diverse application requirements, combining the main qualities currently required by increasingly demanding, knowledgeable customers. **Monarch Engineering** can also upgrade existing systems, perform all maintenance work and provide specific support and remote assistance services.

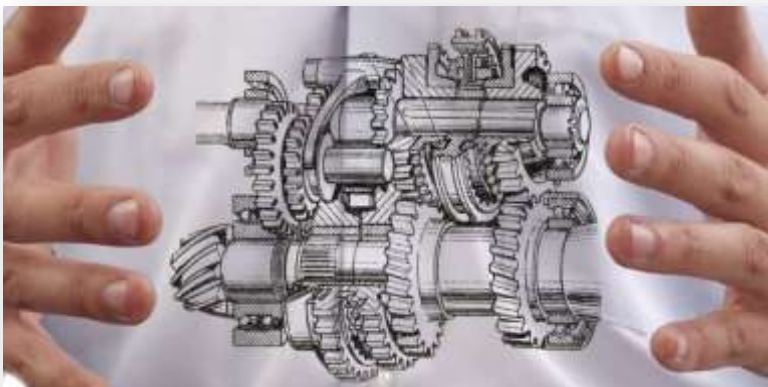

## The MONARCH ENGINEERING Work Philosophy

All MONARCH ENGINEERING products are designed and manufactured within the company. To accomplish this, MONARCH ENGINEERING can count on a team of specialized designers and technicians, capable of producing any type of machine from start to finish. Company organization includes a Mechanical engineering department and an electrical engineering one, for the executive projects and for all the technical drawings destined to be used for the operating and maintenance manuals issuing. One of the company's added values is the ability to offer personalized pieces of equipment based on the client's requests.

## The MONARCH ENGINEERING Work Philosophy

All the software required to operate the systems is developed by the technical electronic department of MONARCH ENGINEERING, consisting of young, skilled engineers. The flexibility of use of the various programs makes it possible to use them with different types and brands of PLC, according to the specifications of the project. The continuous research for added value when creating full systems, with the willingness to offer an increasingly accurate service, has led us to create personalized management and supervision software according to the various needs of our clients. We dedicate particular attention to research and development.

## A Successful Team

Based on the experience fed by the enthusiasm and energy of our young employees. A successful team must include coaches and an experienced guide, to work with young athletes brimming with motivation and with a great will to win. We believe that a competitive company must also focus on young professionals and on their skills. This is why young professionals, guided by expert technicians and workers, are destined to become the real added value of our company

***We believe that a competitive company must also focus on young professionals and on their skills***

This is why young professionals, guided by expert technicians and workers, are **destined to become the real added value of our company**

## YOU THINK WE MAKE

The technical staff of MONARCH ENGINEERING can offer personalized solutions, adapting its own production standards to the needs of its clients

## **SOLUTION FOR ALL NEED**

Below is a summary of our products in the sector of bagging, closing and conveyor systems:

Mechanic and electronic Weighers; volumetric dosing systems.

All types of granule and powder packing machines

Horizontal Flow Wrap Machines

Candy and multi lines Packing Machines

Sauces/Ketchup/Liquid Filling, Sealing, Packing Machines

Open-mouth and valve bagging machines, either net or gross weight.

Bag heat-sealers and form-fill-seal machines starting by reel.

Dosing and connecting belt conveyors; rotating and tilting types.

### **Top-Quality Components**

The use of top-quality components allows us to manufacture reliable, highly performing products, combining our guaranteed professionalism with that of the world's leading manufacturers of parts and components

### **A Highly Skilled Staff**

A highly skilled staff State-of-the-art technologies and wise use of electronics have turned MONARCH ENGINEERING into a protagonist in the sector of packaging systems

### **Strict Testing**

All systems are accurately tested, and their various parts are submitted to strict tests before their final delivery

### **Research & Development**

In a market that never stops evolving, RESEARCH and DEVELOPMENT are the rallying cry we use to remain at the top levels of a sector that offers new challenges every day

## CUSTOMER SERVICES

We are aware of our important role in the technological business growth of our clients. Our duty involves more than supplying machinery and equipment: what we offer is full consultancy services. A service that follows our clients from system planning to its construction and activation, from employee training to machinery optimization. A close relationship with our clients that continues through time thanks to our customer service, a complete and well-articulated after-sales organization, in charge of taking care of our clients. The purpose of this organization can be summarized in three main actions: 1. Management of client requests, with particular attention dedicated to emergencies. 2. Maintenance management. 3. Spare parts management.

Finally, with our modern and rational warehouse management system and the ability to manufacture most mechanical parts in our own premises, we can ensure Item no. 1 includes our remote assistance service. Our technicians can use a modem or the Internet to contact our client's system in real time, making early diagnostics possible and, very often, managing to solve the problem from afar. It includes our rapid intervention units, available in the various countries in which we are present. The next step includes the possibility to decide, together with the client, a schedule for programmed maintenance interventions, based on our own experience and on the level of wear to which a system is subjected. This ensures maximum usability of machinery and reduces downtime to a minimum. Quick and accurate delivery of necessary spare parts. Our quick interventions and our organization provide our clients with guaranteed delivery within 24 hours, a major asset of MONARCH ENGINEERING. We are proud to say

***WE WILL ALWAYS BE  
THERE FOR YOU.***
