NADTEX LLC

ENGINEERING A FUTURE OF POSSIBILITIES

NADTEX L.L.C aims to supply a wide range of top-quality products to meet the needs of any construction project

ASSESSMENT

DESIGN & ENGINEERING

PROFESSIONAL TEAM

We believe that sustainable and eco-friendly practices are essential in the construction sector. We believe that it is our responsibility to contribute to a more sustainable future by reducing our environmental impact and promoting sustainable practices in the building industry.

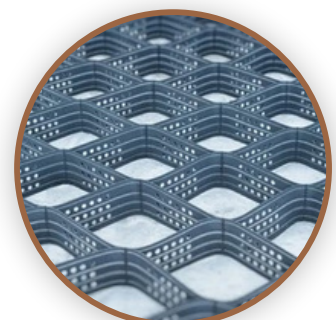

Geotextile

Commonly used in civil engineering and environmental projects to improve soil stability, drainage, filtration, and erosion control.

Geomembrane

Synthetic membranes used in construction and environmental engineering projects for their impermeable properties.

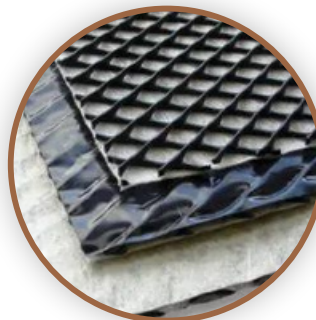

Geocell

Lightweight, and flexible material consisting of polyethylene strips, ultrasonically bonded to form the shape of honeycomb.

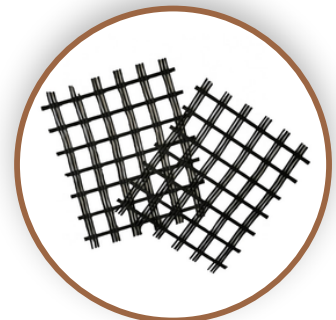

GCL

Have the unique ability to seal around penetrations, self-heal punctures, and self-seam at the overlaps.

GEOCOMPOSITE

A Salt Barrier / Geocomposite consists of combination of one or more geosynthetics, specifically a geogrid, a geotextile, a geomembrane

FIBERGLASS GEOGRID

Pressure sensitive adhesive backing of the grid, which ensures a quick and efficient installation and provides an excellent bond with the surface.

HDPE Duct Spacer

Used to maintain a fixed separation between multiple parallel conduits or ducts that are laid underground or on overhead structures.

COMPOSITE DIMPED GEOMEMBRANE

Used for the construction of green roof systems. Preventing water retention in the form of spills during heavy rainfall.

Drainage Cell

It is the most advanced underground composite that offers high compressive strength and lightweight construction

Non Detectable Warning Tape

Cable covers protect buried service lines like cables and pipes from excavation damage. They feature lightweight, heavy-duty polyethylene construction with printed warning tape for visibility.

Tape

Heavy-duty recycled polyethylene sheet with underground warning tape for cable and pipe protection. Superior to standard warning tape, customizable for thickness, colors, and text.

Baricade Net

Serves as a warning barrier for construction, industrial, highway, and pipeline projects. Designed to meet top standards of quality and safety.

Garden Fence

Top-tier Garden Fence, perfect for farms and gardens. Flexible, durable, weather-resistant, and harmless to animals. Ideal for multiple uses like agriculture, property fencing, and sports barriers.

Under Ground Warning Mesh

Colorful warning mesh with stainless-steel wire and printed tape for buried utilities. Installed above cables or pipelines to visually warn excavators.

TURF GUARD MESH

Top exporter of Turf Guard Mesh, reinforcing and protecting grassed areas with interlocking plastic net filaments. Ideal for pedestrian areas, car parks, and airport taxiways, offering durability and aesthetic appeal.

Warning Tape

Offering a variety of Tape, Non-Detectable Warning tapes to prevent accidental damage to buried utility lines. Installed directly above utilities, effectively warning excavators to halt digging operations.

Underground Cable protection cover tiles

Heavy-duty cable protection made from high-impact polyethylene, ideal for optical fiber and electric cables. Fully jointed, overlapped, and secured with plastic pegs.

Butterfly Valves

Trusted for precision and longevity, our Butterfly Valves offer optimal fluid control for various industries. Lightweight, durable, and easy to install, they ensure efficient performance and low maintenance.

Plunger Valves

Our Plunger Valves offer precise fluid control and reliable performance for diverse industrial needs, ensuring efficiency and durability.

Basket T Strainer

Basket Type Strainers guarantee smooth pipeline operation by effectively removing contaminants, making them essential for industries like petrochemicals and water treatment.

Knife Gate Valve

Knife Gate Valves offer reliable flow control for industries like wastewater treatment and mining. Trust in their durability and performance for efficient fluid handling.

Dismantling Joint

Our Dismantling Joints offer flexibility and durability for water supply and industrial piping. Simplify installation and maintenance with our reliable solution.

SUBMERSIBLE SEWAGE PUMP

Ensure efficient wastewater management with robust construction and energy efficiency. Trust our high-quality solution for reliable sewage handling in diverse applications.

Hollae Jet Valve

Also known as the Conical Valve, delivers exceptional performance and reliability in fluid control systems. Trust our top-quality solution for precise flow rate and pressure control in diverse industrial applications.
