CESIUM CHLORIDE

Cesium chloride is hygroscopic, which means that when it is put in water, it forms a dense solute that is not very viscous. This makes it a good material for equilibrium gradient differential centrifugation, where the separation of particles is dependent on size and density.

SOPHOROLIPID

Sophorolipids are glycolipid biosurfactants that are produced by certain non-pathogenic yeast species. They are made up of a sophorose-based head and a fatty-acid tail.

Sophorolipids are biodegradable and have low eco-toxicity, making them potential bio-surfactants. They are also environmentally compatible and have high biodegradable properties.
