Direct Sourcing and Precise Selection

At Apadana Green Energy, we believe that the quality of every saffron shipment begins at the very source. All of our products are sourced directly from reputable farmers in Iran's saffron-growing regions, without intermediaries, ensuring the authenticity and integrity of each batch. Upon arrival, every shipment undergoes a thorough evaluation of its physical characteristics, including strand length and thickness, natural color, and aroma and flavor intensity. Only the strands that meet our strict standards and international quality criteria are selected for global markets. This meticulous process ensures that the final product is not only visually flawless but also fully delivers the authentic aroma and flavor of premium Iranian saffron.

Varieties of Saffron and Technical Specifications

Iranian saffron is renowned worldwide for its exceptional quality, rich aroma, vibrant color, and unique flavor profile. At Apadana Green Energy, we carefully source and classify saffron into different grades to meet the diverse needs of international markets. Each variety is selected based on strand length, color intensity, aroma strength, and purity, ensuring that every shipment delivers consistent quality and premium characteristics. This section provides a detailed overview of our main saffron types—Negin, Sargol, Pushal, and Powder along with their technical specifications, coloring strength, and ideal applications, allowing buyers to choose the product best suited to their requirements.

Sargol Saffron

Sargol saffron consists of pure red strands without white tips, ranking just below Negin in quality. The color ranges from bright red to deep red, offering strong coloring capacity, and its robust aroma and flavor make it particularly suitable for culinary uses, export packaging, and restaurants. Sargol strikes a balance between premium quality and competitive pricing, making it one of the most popular choices for international trade.

Negin Saffron

Negin saffron represents the highest grade of Iranian saffron, featuring the longest strands with the highest concentration of color and aroma. This type is completely free of white tips, and each strand is carefully selected to be uniform and consistent. Its deep red color and high crocin content provide exceptional coloring power, while the elevated levels of safranal and picrocrocin create a rich and intense aroma and flavor. Negin saffron is the ideal choice for direct consumption, luxury exports, and premium food applications.

Pushal Saffron

Pushal saffron includes red strands with a slight presence of white at the tips. Its moderate color and mild to medium aroma and flavor make it suitable for everyday culinary use and commercial packaging. With a balanced combination of quality and price, Pushal saffron is an ideal option for B2B clients seeking reliable and authentic Iranian saffron.

Saffron Powder

Saffron powder is made by finely grinding premium saffron strands, producing a uniform product free from impurities. The powder ranges from light to deep red and retains the natural aroma and flavor of saffron at its best. It is especially suitable for food manufacturing, beverages, confectionery, and export packaging, providing ease of use in industrial applications.

Coloring Strength (Crocins %) by Saffron Type:

- Negin: 2.5 – 3.5%
- Sargol: 2.0 – 3.0%
- Pushal: 1.5 – 2.5%
- Powder: 1.8 – 2.8%

Quality Assurance and Standard Compliance

For us, quality is not just a slogan it is a scientific and meticulous process. Every shipment undergoes a comprehensive series of physical, chemical, and microbiological tests before entering global markets, including:

- Color Analysis: Detection of any unauthorized additives
- Coloring Strength (Crocin): Determining the natural coloring capacity of saffron
- Safranal and Picrocrocin: Measuring aroma and flavor intensity
- Moisture and Dry Matter: Ensuring product durability and preservation
- Total Ash and Acid-Insoluble Ash: Evaluating mineral content and impurities
- Foreign Matter and Floral Residues: Guaranteeing absolute purity
- Cold-Water Extract and Pigment Assessment
- Total Nitrogen and Crude Fiber: Controlling protein and fiber composition

All these tests are conducted in compliance with ISO/IEC standards and internationally recognized benchmarks, ensuring that clients receive a product that is safe, premium, and reliable.

Luxury Export Packaging

One of the most critical factors in saffron exports is luxury packaging that safeguards product quality throughout the logistics chain. Apadana Green Energy offers saffron in packaging designed to ensure both elegance and durability, including:

- Crystal and metal jars for a premium appearance and long-lasting preservation
- Vacuum-sealed and aluminum pouches to maintain freshness, aroma, and flavor
- Customized designs with private labeling to support client branding and exclusive marketing
- Compliance with international transport and export standards

Before leaving our export warehouse, all packaging undergoes a final quality inspection, ensuring that only saffron with the highest quality and luxury presentation reaches global markets.

Sourcing and Visual Quality Control Process

Key stages of premium saffron sourcing and quality control:

- Direct procurement from trusted farmers in Iran's saffron-growing regions
- Initial quality assessment of strand length, thickness, color, aroma, and flavor
- Advanced QC tests (physical, chemical, and microbiological) under international standards
- Sorting and grading based on quality level
- Luxury packaging with custom designs, preserving authenticity and freshness
- Final quality inspection before export

Process Flow:

Sourcing → Initial Evaluation → QC Tests → Sorting → Luxury Packaging → Final Control → Export

Our Commitment to International Clients

At Apadana Green Energy, we believe that true success in the global saffron market is built on trust, consistency, and uncompromising quality. With an extensive and reliable supply network across Iran's premium saffron growing regions, combined with an advanced quality assurance team and state of the art laboratories, we ensure that every shipment meets the highest international standards.

Our export operations, refined through successful partnerships in more than 20 countries, allow us to deliver saffron that is not only authentic and premium but also packaged and presented as a luxury product tailored to the expectations of global markets. From rigorous quality checks to customized export packaging and timely logistics, every step is designed to provide a seamless experience for our international clients.

We are committed to offering a product that reflects luxury, authenticity, food safety, and world-class reliability. This commitment is more than a promise—it is the foundation of our reputation as a trusted partner for international buyers who seek the finest Iranian saffron with guaranteed excellence.
