

SOYA BEANS & SOYA BEAN MEAL

Soya bean (*AmE* 'soybean') is an essential crop due to its nutritional value and utilisation at household and industrial levels. Soya beans contain more protein than meat and egg. Also, it is the cheapest protein-sourced product consumed by humans and animals. Soya bean oil and soya bean meal are the main components obtained from soya beans. Soya bean meal is often a livestock feed alternative to many animal protein sources. Soya beans have a stable shelf life under appropriate moisture and temperature. It is not a seasonal crop and usually takes three harvest cycles at any time of the year.

Applications		
Whole Soya Beans	Soya Bean Oil	Soya Bean Meal
