

COMPANY PROFILE

Sri Lanka's Dedicated ISPM 15-Certified Wooden Pallet Manufacturer

Company	CeyPall (Pvt) Ltd
Founded	2025 (Timber heritage since 1955)
Location	Daluwakotuwa, Kochchikade, Sri Lanka
Specialisation	ISPM 15-compliant wooden pallets for export & storage
Certification	IPPC Registered — National Plant Quarantine Service, Sri Lanka
Clients	40+ companies across Sri Lanka
Delivery	Island-wide
Contact	+94 312 277 752 office@ceypall.com www.ceypall.com

ABOUT US

CeyPall (Pvt) Ltd is a Sri Lankan manufacturer of high-quality wooden pallets, built specifically for international export markets. Our business is rooted in a timber legacy that stretches back to 1955 — over seven decades of working with wood.

Since 2005, our focus has been the manufacture of ISPM 15-compliant pallets for exporters, freight companies, and manufacturers across Sri Lanka. Every pallet we produce undergoes certified heat treatment and is manufactured under strict quality controls.

We are recognized by the National Plant Quarantine Service of Sri Lanka as a certified heat treatment provider, and every pallet we ship carries the IPPC stamp as proof of compliance.

VISION & MISSION

Vision

To become the leading and preferred provider of high-quality, efficient, and sustainable pallet solutions — driven by innovation, customer satisfaction, and a commitment to the environment.

Mission

To deliver outstanding quality, value, and service to our customers through advanced technology, trained personnel, and environmentally responsible practices. We are committed to providing safe, durable, and customisable pallet solutions — and through innovation, efficiency, and integrity, to achieving sustainable growth and a positive impact on the communities we serve.

OUR PRODUCTS

1. Heat-Treated Wooden Pallets (Export)

Our heat-treated pallets are manufactured specifically for international export. Each pallet is processed in our heat treatment chambers where the core of the wood is brought to 56°C and maintained for a minimum of 30 minutes — eliminating harmful pests, bacteria, and fungi in compliance with ISPM 15 international phytosanitary standards.

Before assembly, all timber undergoes a boron chemical pre-treatment (immersion in a controlled chemical bath at 45°C–60°C for 30–45 minutes) to ensure deep protection and prevent post-treatment contamination.

Every ISPM 15-compliant pallet is stamped with our IPPC logo (including our registration number) and comes with a treatment certificate.

Key features:

- Core heated to 56°C for a minimum of 30 minutes.
- ISPM 15 compliant — accepted in all major export markets.
- IPPC stamped with CeyPall's registered number.
- Treatment certificate provided with every order.
- Boron chemical pre-treatment (dip) applied as standard before assembly.
- Moisture content reduced to below 15%.

2. Storage Pallets (Vacuum Pressure Impregnated)

For warehouse and racking applications where pallets are used long-term, we offer vacuum pressure impregnation. The Boron Borax solution is forced to the core of the wood under pressures of up to 10 bar (145 PSI), providing deep and lasting protection. These pallets carry a warranty of up to 6 years against pest contamination.

Key features:

- Vacuum pressure impregnation — Boron Borax under up to 10 bar pressure
- Protection guaranteed for up to 6 years against pest contamination
- Ideal for warehousing, racking systems, and long-term storage
- Enhanced durability compared to standard pallets

3. Standard & Custom Pallet Sizes

We manufacture all major international pallet sizes and custom dimensions to exact specifications:

Size (mm)	Standard
1200 × 1000	Euro standard
1200 × 800	Euro pallet (EUR/EPAL)
1219 × 1016	North American standard (48" × 40")
1100 × 1100	Asia/Pacific standard
Custom dimensions	Available on request

MANUFACTURING PROCESS

Every CeyPall pallet follows a rigorous, certified manufacturing process:

Step 1 — Timber Sourcing

We use two locally sourced timber species as our primary materials — rubber wood and Lunumidella — both widely available in Sri Lanka and well suited for pallet manufacturing due to their structural strength and durability.

Step 2 — Boron Chemical Pre-Treatment

Before assembly, all timber components are immersed in a boron chemical bath at temperatures between 45°C and 60°C for 30–45 minutes. This standard pre-treatment is applied to every pallet we manufacture, ensuring baseline protection against insects and fungal growth.

Step 3 — Pallet Assembly

Sized and treated planks and blocks are assembled into pallets using industrial nailing equipment. Pallets are built to standard international dimensions or custom specifications.

Step 4 — ISPM 15 Heat Treatment

Assembled pallets are loaded into our heat treatment chambers. The chamber raises the core temperature of the wood to 56°C, maintained for a minimum of 30 minutes. Treatment continues until the average moisture content falls below 15%.

Step 5 — IPPC Stamping

Each pallet is stamped with our IPPC mark — the internationally recognised symbol confirming ISPM 15 compliance — along with CeyPall's official registration number issued by the National Plant Quarantine Service of Sri Lanka.

Step 6 — Certificate & Delivery

A treatment certificate is issued for every order. Pallets are then delivered to your location across Sri Lanka.

WHY CHOOSE CEYPALL

- Timber expertise since 1955
- Pallet manufacturing since 2005
- Officially IPPC registered in Sri Lanka
- ISPM 15 certified — export compliant
- Locally sourced rubber wood and Lunumidella
- Treatment certificates with every order
- Island-wide delivery
- Trusted by 40+ companies across Sri Lanka

OUR CLIENTS

We are proud to supply pallets to some of Sri Lanka's most respected exporters and manufacturers — across tea, food, textiles, chemicals, logistics, and manufacturing.
